

Green that Cleans

Our Sustainability Commitment

To provide the most innovative, high performance and cost effective products, packaging, and programs that promote human health and safety.

Safer Products

We proactively eliminated hard surface cleaners that contained ingredients including: butyl, solvents, and alcohol bases.

Liquescent® Technology

We developed Liquescent® technology, which enabled us to manufacture high performance products while adhering to our principle of human health safety. This technology is so unique that we were awarded a family of seven patents!

Biodegradable Products with Recyclable Packaging

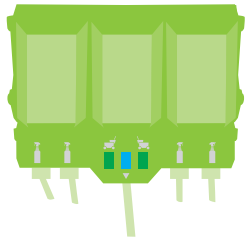

We were the first in the industry to develop the Action Pac® "bag-in-a-box" packaging, eliminating the use of plastic pails and their adverse effects on landfills. Our Smart Sacs™ are manufactured with 60% less plastic and our Eco® 1.25 L bags are manufactured with 83% less plastic than rigid containers. Buckeye products work more efficiently and are biodegradable, and our packaging is recyclable so you use less product and less waste ends up in landfills. And you save money too!

LESS PLASTIC
than rigid containers.

Dilution Control Programs

Our dilution control systems eliminate direct contact with product and ensure our concentrated products are being used according to manufacturer specifications.

Concentrated products are more cost effective – so you don't pay additional freight/fuel charges to ship water. And using less product uses less packaging, another environmental benefit.

Our products, packaging, and dilution control systems are also color and number coded to make them easier and safer for your employees to use.

WORKING

We are committed to enhancing product performance and safety through specialized training programs and education. Our training programs focus on worker and environmental safety, and our standardized procedures reduce your product usage, labor, and overall costs.

What is Green Seal?

"Green Seal is an independent non-profit organization dedicated to safeguarding the environment and transforming the marketplace by promoting the manufacture, purchase, and use of environmentally responsible products and services."
