

INTRODUCING AMT's New Single Use Negative Pressure Wound Therapy Solution

Powered by MasVida Health and PICO[®] Technology

AMTTM
Smith+Nephew

Delivering comfortable and more effective wound care for your residents.

Advanced Wound Care: A Partnership that Promotes Wound Healing in Less Time

This new partnership can improve your clinical outcomes, facilitate timely discharges to increase referral source partnerships, reduce re-admissions, and provide an economical bundled solution to optimize revenue opportunities for your facility.

Clinical Advantage

Negative pressure wound therapy (NPWT) is used to heal a wide variety of complex wounds. AMT provides clinical oversight, managing NPWT utilization to increase outcomes and reduce costs. MasVida Health will act as the distributor and supplier of the PICO single use sNPWT system.

Community Advantage

NPWT systems allow patients to be discharged from the hospital with the NPWT pump, strengthening the partnership with referral relationships. The patient and their families are more comfortable, enhancing community value and patient quality of life.

Economic Advantage

Our partnership offers a bundled flat rate per day. The enhanced clinical support and training reduces consumable waste, streamlines dressing changes to decrease labor costs, and with additional support coupled with the dedicated NPWT portal, reduces utilization days.

Better Solution. Faster Delivery. Improved Outcomes.

Simple. Transparent. Easy.
Bundled solution for one
low rate.

Order supplies as needed.
Typically, shipped same day.

Faster healing. Better
outcomes.

Designed for a Higher Standard

What makes PICO unique

PICO sNPWT features an exclusive mode of action that enables delivery of negative pressure wound therapy across the entire dressing to the wound or incision and periwound, while simultaneously removing exudate.

For high-risk surgical incisions, PICO:

- ✓ Protects the incision from external contamination
- ✓ Helps hold incisions together, reducing lateral tensile forces across the incision
- ✓ Helps to increase the activity of the lymphatic system in deep tissue via reduction in wound fluid

For complex open wounds, PICO:

- ✓ Protects the wound from external contamination
- ✓ Improves wound contraction
- ✓ Assists in stimulation of granulation tissue formation
- ✓ Promotes changes in blood flow, and the formation of new blood vessels
- ✓ Manages up to 300mL of exudate

As compared to standard dressings, PICO has been shown to help:

Reduce the risk of surgical site infections

Hospital re-admission

Improve wound closure rates

Increase patient satisfaction rates

Fewer complications + More convenience

PICO sNPWT features a portable, canister-free design that has been shown to increase patient satisfaction rates across the clinical spectrum:

- ✓ May improve scar quality
- ✓ Portable system allows patients the freedom to continue daily activities
- ✓ Gentle silicone adhesive makes application and removal easy while minimizing pain
- ✓ Waterproof dressing, allowing patients the ability to shower
- ✓ Quiet system better enables patients to sleep

\$649

Length of stay was significantly reduced in closed laparotomy procedures

\$91

A suitable alternative to tNPWT for more than 88% of wounds treated in long-term care facilities, enabling cost savings of up to \$91/day
