

# Combat Illness Related Absences with the Symmetry Hand Hygiene Program

COUGHING

SNEEZING

TOUCHING  
Contaminated Surfaces

The COVID-19 pandemic has made reducing the spread of the flu during the 2020-21 season more important than ever. Decrease the burden on healthcare systems by taking steps to stop the spread of germs in your facility.

Hands are a main transmitter of germs that can cause infection. **Germs can live on your hands for up to three hours.**

## The Centers for Disease Control and Prevention

**(CDC)** states that handwashing and using hand sanitizer when water is not available is one of the best defenses against reducing illness and stopping the spread of germs.

Various studies suggest that a properly implemented hand hygiene program can significantly reduce illness rates throughout school campuses.

Placement paired with proper education, awareness and behavior modification have been shown to help promote a healthier school environment.
